

The Execution of the Project build by as follows:

download all the files in the GitHub repository
containing:=

Data set

.py file

.html file

.pkl file

as it is create one directory in your system and download the files from GitHub
folders

open the directory where you have add all the files

open that folder in vscode

and run the app.py

there will link address with .5000 generate in terminal

then click on the same link it will redirect you on the browser and put the
following inputs and get the recommended crop suited for lands of farmers.
